

ABSTRACT OF THE DISCLOSURE

A method for transmitting information in which the transmission of image information by a mobile tool can be conducted is disclosed. An optional sending image A to be transmitted is drawn by calling images stored in a server 3 of the Internet onto a display 7 of a mobile telephone 1 and by composing them one another. The sending image A is stored in the server 3, and also is distributed from the server 3 to a mobile telephone 2 at the reception side. Since the sending image A is drawn using the storage capacity of the server 3 and distributed from the server 3, transmission of image information from a mobile telephone 1 becomes possible without increasing the storage capacity thereof.
